

TIMESHEET

Scott Woods

Month ending 20/09/2017

4/09/2017	eng setup (remote dev), standup, sprint tasks, integration of logging with webman, analysis/design, discussion with nic, proposed first	7.0
5/09/2017	anaylists of webman logging calls, discuss nics feedback on design, several issues with webman use of std logger and multi-threading, proposed multiple logger approach	5.0
6/09/2017	implementation of design - logger per async thread, major difficulties, reviewed issues against possibilites with nic, shift to single logger object for async world	8.0
7/09/2017	clean up implementation, add logging control flags, converted current use of webman logging, flow control (blocking queue), teardown and integration (logger as parameter), difficulties with final teardown - crude fix	6.0
8/09/2017	complete logging integration and functional testing, refactor all modules for code review, use of import star	7.0
Total		33.0
